

ADD A NEW PORTFOLIO SECTION — PROTOSEM

Add a new dedicated section to the existing portfolio called:

PROTOSEM

This section should represent the student's **PRICE ProtoSem experience** as a structured 20-week professional journey.

Do **not** redesign the entire portfolio.

Do **not** modify unrelated sections.

Do **not** remove existing content, links, assets, or functionality.

Integrate this section naturally into the current portfolio's information architecture and navigation.

1. SECTION PURPOSE

The ProtoSem section should communicate:

PRICE ProtoSem is a 20-week industry-integrated innovation programme focused on solving real-world retail and commerce challenges through AI, analytics, intelligent systems, IoT, prototyping, and entrepreneurship.

The section should feel like a **professional journey / programme archive**, not a generic work-experience card.

The visual presentation should make the visitor immediately understand:

What ProtoSem is → Why it matters → 20 weeks → Each week will eventually contain a detailed story/blog.

2. SECTION INTRO

Create a strong introductory area at the beginning of the section.

Section label

PROTOSEM

Main heading

Use a prominent heading such as:

PRICE ProtoSem

Role

Innovation Engineer Trainee

Programme descriptor

20-Week Industry-Integrated Innovation Programme

Description

Use the following content:

Selected for a 20-week industry-integrated innovation programme focused on solving real-world retail and commerce challenges through AI, analytics, intelligent systems, IoT, prototyping, and entrepreneurship.

Working with industry problem statements to explore, develop, and validate practical technology solutions beyond conventional classroom learning.

These statements are derived from the existing portfolio and should be retained accurately.

3. DOMAIN / FOCUS TAGS

Present the programme focus areas clearly.

Use:

- Phygital Retail & Intelligent Commerce
- AI & Analytics
- Intelligent Systems & IoT
- Prototyping
- Entrepreneurship

The existing portfolio already uses these programme tags.

The exact presentation style is up to the designer.

Avoid making them look like ordinary software skill badges. They should feel like **programme disciplines / focus areas**.

4. THE 20-WEEK JOURNEY

This is the most important part of the section.

Create **20 individual week cards**:

WEEK 01

WEEK 02

WEEK 03

WEEK 04

WEEK 05

WEEK 06

WEEK 07

WEEK 08

WEEK 09

WEEK 10

WEEK 11

WEEK 12

WEEK 13

WEEK 14

WEEK 15

WEEK 16

WEEK 17

WEEK 18

WEEK 19

WEEK 20

For now, these cards are **placeholders only**.

Do NOT create fake titles, descriptions, achievements, activities, or outcomes for the weeks.

Each card should contain only enough information to communicate:

WEEK XX

and optionally:

Coming Soon

5. CREATIVE DIRECTION FOR THE 20 CARDS

Do NOT simply create a boring:

[01] [02] [03] [04]
[05] [06] [07] [08]
...

four-column card grid.

Treat the 20 weeks as a **visual journey**.

The design should communicate chronology and progression.

Preferred concept

Create a **20-step visual progression** that combines a timeline and card-based layout.

Think:

Programme → Phases → Weeks → Future Stories

The 20 cards should visually feel connected rather than isolated.

Possible approaches include:

- A flowing editorial timeline
- A winding chronological path
- A horizontal progression that transforms into a responsive grid
- A milestone rail with cards branching from it
- A modular "programme archive" wall
- A staggered timeline with numbered nodes
- A phase-based journey with 5 weeks per phase

Choose whichever approach best fits the existing portfolio's visual language.

The result should be creative but professional.

6. FOUR-PHASE STRUCTURE

Organise the 20 weeks into four programme phases:

PHASE 01

Weeks 01–05

PHASE 02

Weeks 06–10

PHASE 03

Weeks 11–15

PHASE 04

Weeks 16–20

The phase grouping should be visually apparent.

The existing portfolio already uses this four-phase structure for the 20-week experience log.

7. PHASE NAVIGATION

Provide a lightweight way to navigate the four phases.

For example:

ALL
PHASE 01
PHASE 02
PHASE 03
PHASE 04

Clicking a phase should reveal/highlight the corresponding five week cards.

However, do not force the exact old tab design.

The new interaction should match the redesigned visual language of the portfolio.

The interaction should remain:

- Fast
- Understandable
- Keyboard accessible

- Mobile friendly
-

8. WEEK CARD DESIGN

Every week card should feel clickable.

Each card should contain:

Primary

WEEK 01

Secondary

COMING SOON

or a subtle equivalent such as:

FIELD NOTES IN PROGRESS

Do not add fake content.

Visual metadata

The card may additionally display:

- Phase number
- Week number
- Progress indicator
- Small calendar-like marker
- Timeline node
- Decorative index
- Arrow / directional indicator

These are visual elements only.

9. HOVER / INTERACTION

On desktop, hovering over a week card should clearly communicate:

"This is a future story / blog."

Possible effects:

- Card elevation
- Border or outline transition
- Number enlargement
- Small arrow movement
- Timeline connection activation
- Subtle image or gradient reveal
- Progress-line animation
- Background transition
- Micro typography movement

Keep the animation restrained and polished.

Do not make the interaction gimmicky.

10. CLICK BEHAVIOUR

Every week card must be clickable.

For now, do NOT build the individual blog pages.

Instead, create a clean placeholder navigation system.

Example future routes:

```
/protosem/week-01  
/protosem/week-02  
/protosem/week-03  
...  
/protosem/week-20
```

OR use another sensible route structure.

The exact route naming can be decided by the implementation.

Important:

For now, these destinations may be:

- Placeholder routes
- Placeholder pages
- Hash links
- Temporary empty states

But the code should be structured so that each week can later be connected to its respective blog **without rebuilding the ProtoSem section**.

11. FUTURE BLOG READINESS

Architect the week cards as reusable data-driven components.

For example, conceptually:

```
const protoSemWeeks = [  
  { week: 1, title: "", slug: "week-01", status: "placeholder" },  
  { week: 2, title: "", slug: "week-02", status: "placeholder" },  
  ...  
  { week: 20, title: "", slug: "week-20", status: "placeholder" }  
];
```

Do not hardcode the entire card structure twenty separate times if a reusable component/data structure can achieve the same result.

This will make future blog integration much easier.

12. OPTIONAL VISUAL DETAIL — PROGRAMME PROGRESS

Include a subtle programme progress indicator.

For example:

```
01 — 05 — 10 — 15 — 20
```

or another creative equivalent.

It should communicate that the visitor is looking at a **20-week progression**.

Avoid presenting it as an actual percentage of completion unless real completion data is available.

Do not invent programme progress.

13. RESPONSIVE BEHAVIOUR

The 20-week system must work beautifully on:

- Desktop
- Laptop
- Tablet
- Mobile

On desktop, favour an editorial / timeline / spatial composition.

On mobile, do NOT simply shrink the desktop layout.

Instead, transform the experience into something natural such as:

```
PHASE 01
|
├── WEEK 01
├── WEEK 02
├── WEEK 03
├── WEEK 04
└── WEEK 05

PHASE 02
|
├── WEEK 06
...
```

or another strong mobile-first composition.

14. NAVIGATION INTEGRATION

Add ProtoSem to the site's primary navigation.

Use:

ProtoSem

The navigation should scroll to the new section.

Place the section logically near **Experience**, since ProtoSem is a structured professional programme.

Recommended hierarchy:

About
Skills
Experience
ProtoSem
Projects
Certifications
Education
Contact

Do not remove the existing Experience section.

ProtoSem can either:

1. Exist as a dedicated section immediately after Experience, or
2. Be visually connected to the Experience section while remaining a distinct navigable section.

Prefer option 1 unless the current design makes option 2 significantly better.

15. DESIGN FREEDOM

You have significant creative freedom.

The 20-week presentation is the part that should receive the most visual thought.

Avoid generic:

- Bootstrap-style grids
- Standard dashboard cards
- Identical rectangular cards with no relationship
- Overly decorative gamification
- Fake statistics
- Fake week titles
- Fake progress percentages

Instead, create something that feels like a **professional innovation programme archive**.

The visitor should feel:

"There is a story unfolding across 20 weeks, and I can enter any chapter."

16. CONTENT SAFETY

Use only the information provided above.

Do not invent:

- Week titles
- Week activities
- Technologies
- Achievements
- Outcomes
- Dates
- Metrics
- Client information
- Industry problem statements beyond the provided programme description

The week cards are intentionally placeholders because the detailed ProtoSem blogs will be added later.

17. IMPLEMENTATION REQUIREMENT

Keep all existing portfolio functionality intact.

Do not break:

- Existing navigation
- Existing project links
- Existing certification links
- Resume download
- Profile links
- Existing assets
- Existing sections
- Existing responsive behaviour

Add ProtoSem as a clean extension to the existing website.

FINAL DESIGN INTENT

The section should visually communicate:

ONE PROGRAMME
FOUR PHASES
TWENTY WEEKS

TWENTY STORIES
ONE CONTINUOUS JOURNEY

The design should be memorable, professional, editorial, and distinctly different from a conventional work-experience timeline.

Most importantly:

Build the structure now.
Leave the stories for later.
